Annual Schedule Documentation

AnnualSchedule Entity - Field Breakdown

AnnualSchedule Fields			
Field Name	Type	Meaning	Notes
Id	int	Unique identifier	Primary key
Item	string (max 200)	The title or name of the schedule entry	Example: "Training Programs", "Community Events"
Statement	string (max 1000)	Description or explanation of the item	Used to clarify purpose or context
Previous	decimal?	Value from the previous year	Used to compare changes over time
Current	decimal?	Value from the current year	Represents present performance
Record	decimal?	Actual recorded / achieved value	Could be the result after execution or evaluation
Status	string (max 200)	General state or evaluation of the item	Example: "Completed", "In Progress", "Pending"
Day	DateTime?	Date associated with the record	Used when tied to a specific event date
year	string (max 200)	The year the schedule applies to	Example: "2024" or "2024/2025"

Common Interpretation Example

Performance Comparison				
Item	Previous	Current	Record	Status
Training Courses	25	30	32	Completed
Community Volunteer Events	12	14	10	In Progress

AnnualScheduleVM - ViewModel Fields

AnnualScheduleVM Properties

Property	Meaning	User Input	Validation Applied
Id	Unique identifier (edit/update)	No	None
Item	Schedule entry title	Yes	Required, Max length = 200
Statement	Description/clarification	Yes	Required, Max length = 1000
Previous	Previous year value	Yes	Required, Numeric
Current	Current year value	Yes	Required, Numeric
Record	Final outcome	Yes	Required, Numeric
Status	Overall state	Yes	Required, Max length = 200
Day	Date of the record	Yes	Required, Date format
year	Associated year	Optional	Max length = 200

AnnualScheduleVM Example (Arabic)

Example Interpretation

البند (Item)	السابق (Previous)	الحالي (Current)	السجل (Record)	الحالة (Status)
الأنشطة التطوعية	12	14	16	مكتمل
الدورات التدريبية	20	22	19	قيد التنفيذ

AnnualScheduleVM Example (Arabic)

AnnualScheduleController - Actions

AnnualScheduleService - Methods

AnnualScheduleController - Actions

Controller Action Methods

Action	Purpose	Parameters	Features / Notes
Index	Main listing page	searchTerm, selectedYear, pagination	Year filter, search, pagination, AJAX partial view support
AddEdit (GET)	Display form for create/edit	id (optional)	Localized day name display, maps entity to VM
AddEdit (POST)	Handle create/update	AnnualScheduleVM model	Model validation, year extraction, redirects after save
Details	Read-only view	id	Localized day name, ignores route for direct access
Delete	Remove record	id	HTTP POST, redirects to Index, safe deletion
Print	Printer-friendly list	Filters applied	Same filtering as Index, no pagination
createExcelReport_Download	Generate Excel report	Filters applied	Bilingual columns, timestamped file, error handling

AnnualScheduleService - Methods

Service Methods

Method	Purpose	Parameters	Notes / Behavior
GetAllAsync	Retrieve all records	None	Returns IEnumerable<AnnualSchedule>, async/non-blocking
GetByIdAsync	Get specific record by ID	int id	Nullable return for not found, repository lookup
AddAsync	Add new record	AnnualSchedule entity	Saves entity, commits transaction, returns new ID
UpdateAsync	Update existing record	AnnualSchedule entity	Checks existence, updates values, commits changes
DeleteAsync	Delete record	int id	Checks existence, deletes, commits transaction safely
SaveImageAsync	Save uploaded image file	IFormFile file	Creates folder if missing, generates GUID filename, returns relative path
DeleteImageFile	Delete stored image file	string relativePath	Validates existence, deletes safely
