Budget Item Example

Budget Item Management Documentation

BudgetItemController - Action Methods

Controller Actions

Action	Purpose	Parameters	Notes / Features
Index	Main budget item listing	searchTerm, pagination	Text & numeric search, combined OR logic, AJAX partial view, paginated list (50 items)
AddEdit (GET)	Display create/edit form	id (optional)	Auto-generate new ItemNumber on create, maps existing item on edit
AddEdit (POST)	Handle form submission	BudgetItemVM model	ModelState validation, Anti-forgery token, redirects to Index or edit form
Delete	Remove budget item	id	Service deletion, TempData feedback on failure, boolean result handling
Print	Printer-friendly list	Filters applied	Same search as Index, no pagination, [IgnoreAction]
createExcelReport_Download	Generate Excel report	Filters applied	Bilingual columns, timestamped XLSX file "BudgetItemsList_YYYYMMDD_HHmms.xlsx"

BudgetItemService - Methods

Service Methods

Method	Purpose	Parameters	Notes / Behavior
GetAllAsync	Retrieve all budget items	None	Returns IEnumerable<BudgetItem>
GetByIdAsync	Fetch budget item by ID	int id	Nullable return, repository lookup
AddAsync	Create new budget item	BudgetItem entity	Unique ItemNumber validation, auto-generation, transaction commit, returns new ID
UpdateAsync	Update existing budget item	BudgetItem entity	Fetch existing, update values, commit transaction, null-check safety
DeleteAsync	Remove budget item	int id	Try-catch, boolean result indicating success/failure, commits transaction
GenerateNewCode	Create unique sequential item numbers	None	Finds max existing code, increments by 1, fallback to 1000 on error

BudgetItem vs BudgetItemVM

Budget Item Example

BudgetItem Entity - Fields

Database Model Properties

Property	Description
Id	Primary key of the budget item
ItemNumber	Optional number/identifier for accounting or organization
ItemTitle	Name or title of budget item (max 200 chars)

BudgetItemVM - Fields

Presentation Layer / UI Properties

Property	Description
Id	Same as entity
ItemNumber	Shown in UI but optional, read-only for integrity
ItemTitle	Required in UI, localized validation
HasRelatedExpenseOrReceipt	Not stored in DB. Indicates if item is referenced elsewhere; may disable edit/delete

BudgetItem vs BudgetItemVM

Entity vs ViewModel Comparison

Feature	Entity (BudgetItem)	ViewModel (BudgetItemVM)
Stored in Database	Yes	No
Used in UI / Forms	Possibly	Always
Validation	No localized validation	Localized validation (Required)
Extra UI Logic	No	Yes (HasRelatedExpenseOrReceipt)
