Module Summary

HomeController – Overview

Controller Name	HomeController
Framework	ASP.NET Core MVC
Purpose	Serves as the central hub for admin area navigation, language management, and system-level utilities including redirects and error-safe operations.
Primary Role	Admin dashboard entry point and system-level helper controller

Controller Configuration

Area	Admin
Authorization	AdminAuthorize Attribute
Route Template	Admin/[controller]/[action]
Routing Strategy	Fixed route for centralized admin navigation

Action: Index

Purpose	Main admin entry action
Behavior	Redirects to Statistics controller Index action
Return Type	RedirectToActionResult
Use Case	Acts as the default landing page for the admin area

Index Action – Attributes

[NoLogging]	Prevents this navigation action from being logged
[IgnoreAction]	Excludes the action from route discovery and menus

ChangeLanguage – Attributes

ChangeLanguage – Core Logic

Module Summary

Language Management System

Action Name	ChangeLanguage
Purpose	Switch application language dynamically (Arabic / English)
HTTP Method	GET
Input Parameter	lang (Language code)

ChangeLanguage – Session & Navigation

Session Key	CurrentCulture
Session Value	Language code (e.g., ar / en)
Redirect Logic	Returns user to the referring page
Fallback Redirect	Redirects to root ("/") if Referer is not available

ChangeLanguage – Attributes

[NoLogging]	Language changes are excluded from activity logs
[IgnoreAction]	Hidden from menus and route scanners
[HttpGet]	Safe GET request for switching language

ChangeLanguage – Core Logic

Session Assignment	<code>HttpContext.Session.SetString("CurrentCulture", lang);</code>
Referer Retrieval	<code>var referer = Request.Headers["Referer"].ToString();</code>
Redirect Execution	<code>return Redirect(referer ?? "/");</code>
