LogHistory Views Summary

Module Summary

LogHistoryController – Overview

Controller Name	LogHistoryController
Framework	ASP.NET Core MVC
Primary Purpose	Comprehensive system log management with filtering, timeline view, and audit tracking
Core Features	Dual views, advanced search, member-user resolution, bulk operations

Controller Configuration

Area	Admin
Authorization	AdminAuthorize Attribute
Dependencies	IUnitOfWork (Database access)

Dual View Modes

View	Purpose	User Resolution
Index (List View)	Paginated tabular display of logs	Application users only
Timeline View	Chronological activity stream	Users with member fallback

Advanced Filtering System

Filter Type	Description	Notes
Text Search	Search in AR/EN names, users, controller, action	Case-insensitive
Member Search	Special logic for member-related keywords	Email-based resolution
Date Range	Inclusive request time filtering	DateFrom / DateTo
Noise Filtering	Excludes negotiate/system logs	Automatic

Advanced Filtering System

Smart Member Search Logic

RequestLoggingMiddleware – Overview

Custom Logging Attributes

Middleware Constructor Dependencies

LogsVM – ViewModel

LogHistory Views Summary

Module Summary

Smart Member Search Logic

Trigger Condition	Search term contains "عضو" or "Member"
Processing Logic	<code>var Terms = searchTerm.Trim().Split(" - ");</code>

RequestLoggingMiddleware – Overview

Responsibility	Conditional request logging with role-based exclusions
Localization	Arabic & English log messages
Noise Reduction	Skips anonymous, GET, Master role, SignalR, and error requests

Custom Logging Attributes

Attribute	Purpose	Effect
NoLoggingAttribute	Disable logging	Controller or action excluded
YesGetAttribute	Allow GET logging	Overrides default GET skip

Middleware Constructor Dependencies

Dependency	Type	Purpose
next	RequestDelegate	Continue request pipeline
logger	ILogger	Error logging
HttpContextAccessor	IHttpContextAccessor	Session and user access

LogsVM – ViewModel

LogHistory Views Summary

Module Summary

LogsVM – ViewModel

Property	Type	Description
Id	int	Primary log identifier
UserId	string	User who performed the action
RequestTime	DateTime	Timestamp of request
Controller	string	Controller name
Action	string	Action name
LogTarget	string	Target entity identifier

LogHistory Views Summary

Index.cshtml	Paginated logs list with filtering, printing, and export
_ListPartial.cshtml	AJAX-rendered logs table with pagination
PrintLogHistory.cshtml	Print-optimized logs report
Timeline.cshtml	Visual chronological timeline of activities

Module Summary

Audit Capability	Enterprise-grade request and activity tracking
Security	Admin-only access with role-based exclusions
Performance	Noise-free logging with smart filters
Localization	Full Arabic and English support
