|               |                                                                                                              |
|---------------|--------------------------------------------------------------------------------------------------------------|
| Overview      | ASP.NET Core Controller for managing club maintenance records with PDF validation, filtering, and reporting. |
| Area          | Admin                                                                                                        |
| Authorization | AdminAuthorize                                                                                               |
| Dependencies  | IMaintenanceClubService, ISupplierService, IUnitOfWork, IMapper                                              |

Controller Actions

| Action         | Description                                                                                  |
|----------------|----------------------------------------------------------------------------------------------|
| Index          | Main listing with search, date range filtering, pagination (50 items), AJAX partial loading. |
| AddEdit (GET)  | Loads create or edit form based on optional ID.                                              |
| AddEdit (POST) | Handles form submission with PDF type and size validation (5MB max).                         |
| Delete         | Deletes maintenance record using POST for security.                                          |
| Details        | Read-only maintenance record view.                                                           |
| PrintDetails   | Printable version of maintenance record.                                                     |

PDF Validation Logic

|      |                                                                                                                                                                                    |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Code | <pre>var result = await FileHelper.CheckFileIsPdf_5Mg_Async(model.PdfFile); if (result != "OK" &amp;&amp; result != "null") ModelState.AddModelError("PdfFilePath", result);</pre> |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|              |                                                                                              |
|--------------|----------------------------------------------------------------------------------------------|
| Overview     | Service layer implementing business logic for maintenance management with PDF file handling. |
| Namespace    | Application.Services.Admin                                                                   |
| Interface    | IMaintenanceClubService                                                                      |
| Dependencies | IUnitOfWork, IWebHostEnvironment                                                             |

Service Methods

| Method       | Responsibility                               |
|--------------|----------------------------------------------|
| GetAllAsync  | Retrieve all maintenance records.            |
| GetByIdAsync | Retrieve maintenance record by ID.           |
| AddAsync     | Create record and save PDF file.             |
| UpdateAsync  | Update record with optional PDF replacement. |
| DeleteAsync  | Delete record and associated PDF file.       |

PDF Save Logic

|      |                                                                                                                                |
|------|--------------------------------------------------------------------------------------------------------------------------------|
| Code | <code>entity.PdfFilePath = entity.PdfFile == null ? "" :<br/>await FileHelper.SaveImageAsync(entity.PdfFile, FileName);</code> |
|------|--------------------------------------------------------------------------------------------------------------------------------|

MaintenanceClub Entity

|           |                                                       |
|-----------|-------------------------------------------------------|
| Namespace | Domain.Entities                                       |
| Purpose   | Stores maintenance scheduling and documentation data. |

Entity Properties

| Property    | Description                                  |
|-------------|----------------------------------------------|
| Id          | Primary key identifier.                      |
| Title       | Maintenance title (Arabic display, max 100). |
| Date        | Maintenance date.                            |
| Time        | Maintenance time.                            |
| Location    | Maintenance location (max 200).              |
| Details     | Detailed description (max 2000).             |
| PdfFilePath | Stored PDF file path.                        |
| PdfFile     | IFormFile upload (NotMapped).                |

MaintenanceClubVM

|           |                                                             |
|-----------|-------------------------------------------------------------|
| Namespace | FougeraClub.Areas.Admin.ViewModels.MaintenanceClub          |
| Purpose   | ViewModel for add/edit maintenance records with validation. |

ViewModel Properties

| Property    | Details                         |
|-------------|---------------------------------|
| Title       | Required, localized validation. |
| Date        | Required, Date picker.          |
| Time        | Required, Time picker.          |
| Location    | Required, max 200.              |
| Details     | Optional, max 2000.             |
| PdfFile     | PDF upload, validated.          |
| PdfFilePath | Stored file path.               |
