Supplier Module Documentation

SupplierController

Aspect	Description
Overview	ASP.NET Core controller for managing suppliers with bilingual support, search, pagination, and export features.
Area	Admin
Authorization	AdminAuthorize attribute
Dependencies	- ISupplierService - IMapper

Controller Actions

Action	Purpose	Notes
Index	Main suppliers listing	- Search (Arabic / English / Email / Phone) - Pagination (50 items) - AJAX partial loading
AddEdit (GET)	Load create/edit form	Maps entity to ViewModel when editing
AddEdit (POST)	Save supplier	ModelState validation and redirect logic
Delete	Delete supplier	HTTP POST with redirect
Print	Printable supplier list	No pagination – same filters as Index
createExcelReport_Download	Excel export	Localized bilingual XLSX output

Business Logic Summary

Search Logic

Implementation

```
supplierVMs = supplierVMs.Where(s =>
(!string.IsNullOrEmpty(s.SupplierNameAr) &&
s.SupplierNameAr.Contains(searchTerm, StringComparison.OrdinalIgnoreCase))
|| (!string.IsNullOrEmpty(s.SupplierNameEn) &&
s.SupplierNameEn.Contains(searchTerm, StringComparison.OrdinalIgnoreCase))
|| (!string.IsNullOrEmpty(s.Email) && s.Email.Contains(searchTerm,
StringComparison.OrdinalIgnoreCase)) || (!string.IsNullOrEmpty(s.Phone) &&
s.Phone.Contains(searchTerm, StringComparison.OrdinalIgnoreCase)) );
```

SupplierService

Aspect	Description
Overview	Service layer handling supplier CRUD with relationship integrity and attachment handling.
Dependencies	- IUnitOfWork - IWebHostEnvironment

Service Methods

Method	Purpose	Notes
GetAllAsync()	Retrieve suppliers	AsNoTracking + HasRelatedData check
GetByIdAsync()	Get supplier by ID	Nullable return
AddAsync()	Create supplier	Returns created ID
UpdateAsync()	Update supplier	Null-safe update
DeleteAsync()	Delete supplier	Null-safe delete

Relationship Integrity

Logic

```
HasRelatedData = context.Expenses.Any(e => e.SupplierId == s.Id) ||
context.Receipts.Any(r => r.SupplierId == s.Id) ||
context.PurchaseOrders.Any(po => po.SupplierId == s.Id);
```
