Account Member - Full Module Documentation

Account Controller – Overview

Aspect	Description
Area	Member
Route	/Member/Account/[action]
Purpose	Handles authentication, registration, profile management, and document processing
Architecture	MVC with Service Layer abstraction

Dependencies & Services

Service	Responsibility
IAccountService	Registration, authentication, image handling
IUnitOfWork	Database transactions and repositories
IHttpContextAccessor	Session and HTTP context access
IMapper	DTO ↔ ViewModel ↔ Entity mapping
IMemberService	Member code generation and admin logic
IOCRService	OCR text extraction from ID images
IWebHostEnvironment	Path resolution and environment awareness

Security & Internationalization

Key System Benefits

Core Controller Methods

IDClassification_Json

Step	Details
File Validation	Null and size validation
AI Classification	ML model identifies document type
Confidence Threshold	90% minimum required
OCR Processing	Extracts text using IOCRService
Cleanup	Deletes temporary files

Register

Feature	Description
Dropdown Setup	Gender, nationality, city, profession
Member Code	Generated automatically
Image Handling	Session-based temporary storage
Validation	Form + image validation
Auto Login	User logged in after successful registration

Login & Logout

Aspect	Implementation
Credential Validation	Email + password check
Account Status	Suspended accounts blocked
Session Token	GUID-based authentication token
Logout	Session cleared completely

Key System Benefits

Account Service – Overview

Aspect	Description
Namespace	Application.Services.Member
Implements	IAccountService
Pattern	Service + Repository + Session

Service Methods

Method	Purpose
RegisterAsync	Validates and registers new members
ValidateUserAsync	Authenticates user credentials
GetMemberByEmailAsync	Fetch member for profile management
UpdateMemberAsync	Updates member data

Member Entity – Core Fields

Property	Type	Description
Id	int	Primary key
Code	int?	Unique member code
FullNameAr	string	Arabic full name
FullNameEn	string	English full name
Email	string	Authentication email
Password	string	Hashed password
Suspended	bool	Account status

Image Fields

Field	Description
ProfileImagePath	Stored profile image path
IdImagePath	ID document image path
PassportImagePath	Passport image path

Member View Models & Views Documentation

Member View Models – Overview

ViewModel	Purpose
MemberRegisterVM	New member registration with strict validation
MemberEditVM	Edit existing member profile
MemberVM	General member data representation
MemberLoginVM	Authentication model

Common ViewModel Features

Category	Details
Identification	ID, Code, Arabic & English names
Contact	Phone numbers, email, address
Demographics	Nationality, gender, date of birth
Professional	Education, profession
Images	Profile, ID, passport images
Validation	IValidatableObject with business rules

Security & Internationalization

Key System Benefits

Validation Framework

Validation Type	Implementation
Localization	Resource-based multilingual messages
Custom Attributes	LocalizedRequired, InThePast, NotInThePast
Regex Rules	Arabic/English names, ID number format
Business Rules	Age restrictions, ID expiry validation

MemberRegisterVM

Registration Rules

Rule	Description
ID Number Format	UAE format (XXX-XXXX-XXXXXXXX-X)
Uniqueness	Email, phone number, ID number
Password Policy	Strong password with confirmation
ID Expiry	Must be a future date

Special Fields

Field	Purpose
g1–g4	ID number segmentation
ConfirmPassword	Password verification

MemberEditVM

Aspect	Description
Unique Validation	Disabled for existing data
Password	No confirmation required
Images	Optional replacement

Security & Internationalization

Key System Benefits

PrintDetails.cshtml

Feature	Description
Layout	Two-column printable layout
Images	Profile, ID, passport
Auto Print	Triggers print dialog on load

Security & Internationalization

Aspect	Implementation
Localization	Resource-based bilingual support
RTL/LTR	Dynamic layout switching
Validation	Client & server-side
CSRF	Anti-forgery tokens

Key System Benefits

- Secure session-based authentication
- AI-powered ID classification & OCR
- Robust image management workflow
- Clean service-layer separation
- Fully internationalized (Arabic / English)
- Strong validation and security rules
- Clean ViewModel separation
- Printable and admin-friendly views
- Scalable and maintainable UI architecture
