Application Helpers Documentation

AppDubaiTime Helper

Overview

Description
Static utility class providing Dubai timezone-aware date and time operations for applications requiring consistent time handling in the UAE timezone.

Core Properties

Property	Type	Description	Usage
Now	DateTime	Current date and time converted to Dubai timezone	Real-time Dubai time operations
Today	DateOnly	Dubai current date without time portion	Date-only business logic
NowOffset	DateTimeOffset	Dubai date and time with timezone offset preserved	Timezone-aware persistence

Conversion Methods

Method	Purpose	Implementation Details
ConvertToDubaiDateTime	Converts UTC DateTime to Dubai timezone	Ensures UTC kind, converts using TimeZoneInfo.ConvertTimeFromUtc, returns Dubai-localized DateTime

Usage Example

Example
<pre>var utcTime = new DateTime(2024, 1, 1, 10, 0, 0, DateTimeKind.Utc); var dubaiTime = AppDubaiTime.ConvertToDubaiDateTime(utcTime);</pre>

TafqeetHelper

ClaimsPrincipalExtensions

Purpose

Description
Provides extension methods for ClaimsPrincipal to simplify access to authenticated user identity data and related database queries.

Namespace & Dependencies

Dependency	Description
Infrastructure.Repositories.InterfacesDB	Access to Unit of Work and repositories
Microsoft.EntityFrameworkCore	Async database queries
System.Security.Claims	User claims access

Helper Class

Declaration
<pre>public static class ClaimsPrincipalExtensions</pre>

GetUserId

Aspect	Details
Purpose	Retrieves authenticated user ID from claims
Claim Type	ClaimTypes.NameIdentifier
Return	string? (null if not authenticated)

GetUserPhoneNumberAsync

Aspect	Details
Purpose	Retrieves user phone number from database
Flow	Extract UserId → Query Users table → Select PhoneNumber → Return async

OTPHelper

TafqeetHelper

EnumHelper

Overview

Description
Utility class for retrieving DisplayAttribute values from enum members with fallback behavior.

GetDisplayName

Aspect	Details
Purpose	Returns display name or enum value
Signature	public static string GetDisplayName(Enum enumValue)

FileHelper

Core Operations

Method	Purpose
SaveImageAsync	Saves images with GUID naming
CheckFileIsPdf_5Mg_Async	Validates PDF (5MB)
CheckFileIsImage_3Mg_Async	Validates images (3MB)
DeleteImageFile	Deletes stored files
IsFileExist	Checks file existence

HashHelper

ComputeSha256Hash

Aspect	Details
Purpose	Computes SHA-256 hash of input string
Return	Hexadecimal hash string

OTPHelper

Methods

Method	Purpose
SaveOtpAsync	Generates and stores hashed OTP with expiration
ValidateOtpAsync	Validates OTP and marks as used

TafqeetHelper

Overview

Description
Converts numeric amounts to Arabic and English written text with correct grammatical and currency rules.

Main Method

Method	Purpose
Tafqeet	Routes conversion based on currency language
