PaginatedList

Overview

Description
Generic pagination utility for efficient data handling in web applications with support for search, filtering, and pagination metadata.

Properties

Property	Type	Description
Items	List<T>	Paginated items
PageIndex	int	Current page number
PageSize	int	Items per page
TotalPages	int	Total pages
Count	int	Items on current page
TotalCount	int	Total items across all pages
SearchTerm	string?	Search query
dateFrom	string?	Start date filter
dateTo	string?	End date filter
HasPreviousPage	bool	Indicates previous page exists
HasNextPage	bool	Indicates next page exists

INDEX

- PaginatedList
- PermissionScanner
- RadioButtonHelper
- RemoteAttributes
- SelectListHelper
- SessionHelper

Usage Example

Example

```
var query = _context.Users.AsQueryable();
var paginated = PaginatedList<User>.Create(query, pageIndex: 1, pageSize: 10);
```

PermissionScanner

Overview

Description
Comprehensive permission management and role validation system for ASP.NET Core applications.

Methods

Method	Purpose
GetAllActionPermissions	Scans controllers to extract action permissions ("Controller.Action")
ValidatePermission	Checks if current user has permission for a given action
ValidateRoleNumber	Retrieves user's role number from session
CheckLoggedInUserIfTrainer	Checks if logged-in user is associated with a trainer profile
CheckLoggedInUserIfHasSignature	Checks if user has a digital signature

RadioButtonHelper

Overview

Description
Static helper to generate radio button lists from enums with localization support using DisplayAttribute.

INDEX

PaginatedList
PermissionScanner
RadioButtonHelper
RemoteAttributes
SelectListHelper
SessionHelper

Methods

Method	Purpose
GetDisplayName	Returns localized display name of an enum value
GetAllWithNames	Returns all enum values with IDs and names
GetRadioList	Generates SelectListItem collection for Razor radio buttons

RemoteAttributes

Overview

Description
Server-side validation for unique field constraints with EF and expression trees, supporting create/edit scenarios.

Methods

Method	Purpose
IsUnique<T>	Validates if property value is unique, excluding current entity when updating

SelectListHelper

Overview

Description
Generates SelectListItem collections from enums or entity lists with multi-language support and dynamic property mapping.

INDEX

PaginatedList
PermissionScanner
RadioButtonHelper
RemoteAttributes
SelectListHelper
SessionHelper

Methods

Method	Purpose
GetEnumSelectList	Creates enum-based SelectListItem collection
BindSelectList	Generates SelectList from entity list with language-aware text
BindSelectListIdString	String-based ID version of BindSelectList
BindSelectListWithDataFromUsers	Advanced dropdown joining entity and user data

SessionHelper

Overview

Description
Static utility for managing session data, focusing on language/culture settings and HTTP context access.

Methods

Method	Purpose
Configure	Initializes SessionHelper with IHttpContextAccessor
GetCurrentLanguage	Retrieves current language/culture from session, default "ar"
